

# *Introduction*

by *Eva Maria Pfostel*

Transition towards Well-being sustainability requires a commitment from all Society's stakeholders.

In this context, it is essential that researchers are able to grasp the importance of analysing specific issues that are increasingly turning out to be central along the path that must lead to the achievement of the strategic objectives set by the United Nations Global Agenda for 2030.

In particular, firms and international institutions, responsible for strengthening cooperation between states on the environmental issue, need of deep analyses relating to the various types of impact on Well-being and its Sustainability, as well as innovative solutions to address them.

The *Review of studies on sustainability* dedicates a first part of this issue 2/2021 to this central theme by hosting a special issue introduced by a valuable editorial by prof. Viacheslav Kerner.

As well, in this issue, we want to inaugurate a new section, "Solutions for Sustainability", where we host papers that, through different approaches, suggest to policy maker strategies able to guide stakeholders' decision-making models towards sustainability's transition.
